

Identifying Matter

Note-taking Guide – Answer Key

behave, space, characteristics, mass, properties, matter

Tess describes the characteristics of her puppy, so that her neighbors could help her look for the puppy.

We can describe objects by the way they look, feel, or behave.

These characteristics are called properties.

Different objects have different properties, but they are all made of matter.

Matter is anything that has mass and occupies space.

The properties of matter help us to identify it.
