

What is Weather?

Note-taking Guide – Answer Key

change, air, hurricane, time, Sun, thunder, sunny

Weather is what the air is like at a given place or time. It could be wet or dry, cloudy or windy!

Weather can change from day to day.

Sometimes, a warm, sunny morning can turn into a cold, rainy afternoon within a few hours.

Sometimes, the weather is calm, but other times it acts violently with thunder and lightning. Sometimes, there are hurricane force winds.

The Sun heats the surface of Earth and warms the air above it—and that's the first important step in getting the weather going!
